METHODOLOGY, SAMPLE FRAME CONSTRUCTION AND DATA COLLECTION PROCEDURES

This poll was conducted by Susquehanna Polling and Research, Inc¹, with questions sponsored by Convention of States Action. Interviews were conducted June 3-8, 2024, with 600 registered voters in Ohio. Survey respondents are randomly contacted using random selection procedures, and all telephone interviews are conducted using live telephone agents. The sample frame was compiled using random telephone sequence methods, and includes both landline and cellular households, purchased from a certified list vendor; all households are pre-screened to eliminate household telephone numbers on the federal Do Not Call registry in compliance with all applicable federal and state laws. Only known registered voters were contacted, compiled from a list of households with prior vote history in 1 of 4 or better general elections using G23, G22, G21 and/or G20 as the base universe. Voters who registered to vote after the 2023 general election are also included and eligible to participate.

Interviews are closely monitored to ensure a representative sample of the Ohio electorate is achieved based on party registration, geography, gender, age cohort and other demographics; results are sometimes statistically weighted to adjust for coverage bias or non-response error.

The margin of error for a sample size of 600 interviews is +/-4.0% at the 95% confidence level.
